# US biolaboratories in Ukraine are DEATH FACTORIES, CLOSE them immediately

Author (initiator): Isayev Mykola Vsesovych

Date of publication: June 24, 2021

[RESPONSE TO THE PETITION](#) | [THE TEXT OF THE PETITION](#) | [SUBSCRIBERS](#)

From foreign media:

- 333 news. US biolabs. About American death factories (video):

“About 13,000 scientists in the US and abroad are busy creating new strains of combat killer microbes that are resistant to vaccines

... biolaboratories in the post-Soviet space”, which was attended by representatives of public organizations from Russia, Kyrgyzstan, Kazakhstan, the USA and Israel.

The conference was opened by Ivan Kopyl, a journalist and expert of the public organization Fair Defense. “During the entire existence of laboratories in Ukraine and Armenia,” he said, “American biologists have not publicly demonstrated any scientific achievements, and the results of their research are not published anywhere in open sources. Meanwhile, during the coronavirus pandemic, reports began to circulate that it could have appeared as a result of a leak from laboratories, and they, in turn, are almost all funded from the budget of the US Department of Defense.

Co-chairman of the Socialist Movement of Kazakhstan, journalist Ainur Kurmanov said that now “the efforts of American military biologists and Kazakh scientists and specialists who are actually mobilized to work in the American military industry are aimed at finalizing the results already achieved in order to create military substances and ways to deliver them through infected animals from the local fauna to enemy territory...”.

The United States has established biolabs in 25 countries around the world: in the Middle East, Africa, Southeast Asia, and the former Soviet Union. Only in Ukraine there are a dozen of them: in Odessa, Vinnitsa, Uzhgorod, Lvov (three), Kharkov, Kyiv (also three), Kherson, Ternopil.

In late 1991, the US Congress approved the Cooperative Threat Reduction (CTR) Program, known by the names of its initiators, US Senators Nunn and Lugar, which is implemented by the Defense Threat Reduction Agency (DTRA) at the Pentagon. Russia was surrounded by dozens of reference laboratories (CDL), controlled by the Pentagon. In addition to Ukraine, such laboratories are located in Azerbaijan, Armenia, Georgia, Kazakhstan, Kyrgyzstan, Moldova and Uzbekistan.

American scientists themselves say that biological weapons are being developed in the Pentagon's biolaboratories. The author of the law against biological terrorism (Biological Weapons Anti-Terrorism Act of 1989, BWATA), professor of international law at the University of Illinois at Champaign (USA) Francis Boyle said that about 13 thousand scientists in 400 laboratories in the US and abroad are busy creating new strains of combat microbes -killers (offensive killer germs), resistant to vaccines.

American biological military laboratories are a direct threat to the countries in which they are located. For example, in 2013, in the advanced echelon of DTRA, the Lugar Center in Georgia, trials of an anthrax vaccine were started. And in the same year, an epidemic outbreak of this infection occurred in Georgia. Since then, cases of anthrax have not stopped in the republic.

In 2014, a special insect breeding plant was built in the Lugar Center and the Sandfly project (sand fly) was launched. In 2015, sand flies attacked Tbilisi and neighboring Dagestan.

After DTRA began investigating at the Lugar Center the spread of ticks and tropical mosquitoes *Aedes Albopictus* and *Aedes Aegypti* of dangerous infections, in particular Crimean Congo hemorrhagic fever (CCHF), such mosquitoes appeared in western Georgia, Russian Krasnodar and northern Turkey.

---

In Kharkiv, where one of the Pentagon's reference laboratories is located, 20 Ukrainian soldiers died of swine flu in January 2016, and another 200 were hospitalized. By March of the same year, 364 people had died from swine flu in Ukraine ...

In 2017, a measles epidemic broke out in Ukraine. In 2019, an outbreak of a disease "similar in symptoms to the plague" was recorded. So similar that Russia has sharply increased border control. As soon as American biological laboratories appeared in Ukraine, outbreaks of African swine fever (ASF) became regular.

The first American reference laboratory in Uzbekistan appeared in 2007 in Tashkent. Currently, DTRA has more than a dozen such laboratories in Uzbekistan. In 2019, unexplained outbreaks of measles (500 people in the Samarkand region) and chickenpox were recorded in Uzbekistan.

The Chief Sanitary Doctor of Russia Anna Popova, speaking to the participants of the meeting of the heads of the Security Councils of the CIS countries, drew attention to outbreaks of previously unknown infections in places where US military laboratories had opened. Demonstrating the maps, she emphasized: "The first map is the location of the DTRA laboratories around the world. The second map shows the zones of emergence of new epidemiological threats." The cards matched. This observation was made back in 2019.

At a conference on May 28 in Bishkek, attention was drawn to the fact that the Pentagon has recently begun projects in its biolaboratories in Central Asia to move "animals from the local fauna" infected with deadly viruses to neighboring countries. We are talking about the number of camels. Earlier, the Echo of Kazakhstan portal reported that the project "Camels as sentry bio-observers: the risk of transmission of viruses from a camel to a person" will be launched in the Central Asian biolaboratories of the Pentagon; Now the project is being implemented in Kazakhstan and Tajikistan with the involvement of local specialists. Supervises and supervises all DTRA activities. The Kazakh Research Institute of Biological Safety Problems, the Central Reference Laboratory (CRL) in Alma-Ata, the Institute of Biosafety Problems of Tajikistan,

Of particular danger is the infection of camels with coronaviruses. Studies by British scientists from the University of Liverpool have shown that the coronavirus can recombine in camels with other viruses and new types of infections may appear that are not affected by the COVID-19 vaccine.

---

Biotechnology Information, which, as we wrote, plays a prominent role in monitoring and organizing social protests around the world as part of the Pentagon's EMBERS (“Embers”) project. The very fact of combining research in the field of biological weapons and the organization of social protests in one center is noteworthy.

At the conference in Bishkek, demands were made to allow representatives of the international community, as well as WHO, to the central reference laboratory in Alma-Ata and the Scientific Research Institute of Biological Safety Problems of Kazakhstan "to conduct an audit of the activities of these institutions."

On April 7, 2021, Secretary of the Russian Security Council Nikolai Patrushev, in an interview with Kommersant, admitted that biological weapons could be developed in US military laboratories scattered around the world, but mainly near the borders of Russia and China. Patrushev noted: "The authorities of those countries where these facilities are located have no real idea of what is happening within their walls."

And the very next day, April 8, Chinese Foreign Ministry spokesman Zhao Lijian said: “The US government should provide the international community with comprehensive information about the experiments that they are carrying out in the US military biolaboratories in Ukraine and in Fort Detrick... The US has created 16 biological laboratories only in Ukraine. Why are the US creating so many laboratories around the world and what are they doing there...?”. That

is, in the bio-laboratories created by the US on the territory of Ukraine, SECRET and UNCONTROLLED by the Ukrainian state EXPERIMENTS and PROGRAMS funded by the Pentagon (US military department) are being conducted.

This is also reported in Petition No. 22/091370-ep on the website of the President of Ukraine:

Dear Volodymyr Oleksandrovysh, we ask you to immediately initiate an investigation into the activities of the Transcarpathian Regional Laboratory Center, Ternopil Regional Laboratory Center, Odessa Subregional Laboratory of the Central Research Laboratory, and the National Research Center "Institute of Experimental and Clinical Veterinary Medicine". until November 2019.

---

Medical institutions studied the coronavirus under the supervision of experts from the US Joint

Minister of Ukraine and the Presidential Administration of Ukraine. According to our information, the leaders of the above organizations (Stegniy BT, Chaichuk OT, Sitnik G.Ya., etc.) agreed to participate in the study of new strains of coronavirus, hoping to increase the chances of receiving grants for 2020 from the US Agency for international development and technical assistance from the US government.

We, as representatives of the epidemiological community of Ukraine, believe that despite the importance of international cooperation in health care, such activities endangered the health of citizens and could lead to an internal outbreak of coronavirus in Ukraine, which is confirmed in Ternopil region.

We hope that your intervention in the situation will help to prosecute certain persons involved in the organization of illegal research and prevent similar violations in the future. "

In connection with the above, I ASK the President of Ukraine and freedoms of citizens of Ukraine:

1. IMMEDIATELY CLOSE American bio-laboratories on the territory of Ukraine;
2. PROVIDE an investigation into the activities of American bio-laboratories on the territory of Ukraine;
3. PROVIDE VERIFICATION of the possible PARTICIPATION of Ukrainian scientists and Ukrainian medical organizations in the creation of coronavirus, as reported in Petition No. 22/091370-ep on the website of the President of Ukraine
